

Professional Summary

As a skilled software engineer with 2 years of experience, I have expertise in React, Node.js, and backend technologies, building robust systems and managing projects to meet diverse customer needs and challenging timelines. Experienced in Agile methodologies, performance optimization, and third-party API integration, I am dedicated to delivering innovative solutions and exceeding expectations. Focused on leveraging my skills and experience to add value to an organization, I am committed to continuous growth and professional development.

Skills

- HTML/CSS | Tailwind CSS | JavaScript | TypeScript | React | Redux | Node JS | Express JS | Nest JS | Next JS | Microservices | JWT | MongoDB | Postgresql | MySQL | Redis | Prisma ORM | C | C++ | Java
- AWS | Docker | Rabbit MQ | Web Sockets | Unit Testing | OOP | DSA | Rest API | Git | Jira
- Team Work | Problem Solving | Analytics

Work Experience

Esparkbiz Technologies Software Developer	Ahmedabad, Gujarat 06/2024 - Present
- Developed full-stack applications with Express, React, Node.js, Electron, and Prisma, cutting development time by about 2 weeks per project and significantly boosting performance and user satisfaction. - Participated in Agile processes including sprint planning and daily stand-ups. Analyzed best practices that reduced project cycle times by 15% and ensured timely, high-quality software delivery. - Refactored legacy codebases to enhance performance and maintainability, improving code quality and reducing critical issues. Applied modern standards to simplify updates and reduce technical debt. - Integrated third-party APIs and optimized database queries and indexes, improving application functionality. Kept current with industry trends to apply innovative backend solutions.	
Glasier Inc. MERN Stack Developer	Ahmedabad, Gujarat 03/2023 - 05/2024
- Led server logic and REST API development, achieving a 40% improvement in application response times and a 25% boost in overall performance using React, Node.js, Next.js, Express, and Nest.js. - Implemented cutting-edge technologies to build scalable and efficient web applications, enhancing front-end responsiveness and delivering optimal performance. - Collaborated with cross-functional teams, including designers and product managers, to conceptualize and execute innovative software solutions, ensuring high- quality interactive web experiences.	

Projects

Authentication & Authorization SDK with Government Verification and VDT Minting

Development of a secure and scalable SDK that provides authentication and authorization for any transactions between individuals, businesses, and government-affiliated entities. The SDK integrates with government systems to verify the identity and legitimacy of users or organizations involved in each transaction. Once verified, each transaction or access request is minted as a Virtual Data Token (VDT), which is then stored on a Web3-based blockchain infrastructure. This ensures that all data is encrypted, immutable, and tamper-proof, with full control given to the user over **what** information is shared, with **whom**, **when**, and **where**. By leveraging VDTs and blockchain-backed storage, the system ensures data transparency, user consent, and compliance with privacy regulations, all while maintaining the highest level of security and trust in digital interactions.

Pet Management Application

Contributed to the development of an advanced pet management tool for veterinarians, featuring Google Calendar like appointment scheduling and chiropractic point mapping on animal skeletons. The application supports multi-contact and location management, comprehensive invoicing, patient evaluations, and historical record imports. Role based access controls enhance user experience and operational efficiency, leading to significant improvements in patient care across various veterinary practices.

Employee Management Hub

As a Full Stack Developer, I designed and created a SaaS platform to streamline HR functions, including attendance tracking, leave management, and shift scheduling. I integrated role-based access controls, training management, and a complaints handling system, resulting in a 30% reduction in administrative overhead and a 25% increase in employee satisfaction.

Educational Institute Management System

Crafted and developed a comprehensive SaaS solution for Educational Institute Management, featuring a robust College Management System. This centralized web portal streamlines the management of various college functions, including faculty, courses, fees, student onboarding, hostel management, canteen management, and library services. It also supports the organization of subjects across different classes and courses. By offering a seamless interface for students, faculty, and administration, this platform ensures efficient access to essential resources and functionalities, enhancing both operational efficiency and the overall user experience across the institution.

Education

RGPV University	Bhopal, M.P.
Master Of Computer Application (MCA)	05/2023
Awarded by GENIUS: ACADEMICS	
DAVV University	Indore, M.P.
Bachelor Of Science In Information Technology	05/2021

Training / Certifications

- Certification in C, C++, and Python Programming from the Indian Institute of Technology, Bombay
- Advanced React JS from Coursera, offered by Meta.
- Python Training through the Barclays LifeSkills Programme, GTT Foundation.
